PROJECT SUMMARY

The Beneficial Electrification League (BEL) will use ARISE funding to modernize electric utility grid infrastructure across 279 counties in eight states. Working collaboratively with 32 electric cooperatives and municipal electric utility companies, BEL will expand a multistate technical assistance network established through its previous ARISE planning grant, and accelerate the adoption of advanced electric utility grid technologies and infrastructure.

BEL brings \$3.6 million in match to this project. The project is expected to improve 32 businesses during the 5-year performance period.
